

Doximity & Handshake

Top Features, Limitations & Opportunities for SIH26044

1. Doximity — Top Features

Feature	Purpose
Professional profile & networking	Connects healthcare professionals and supports professional identity building.
Medical news & updates	Provides healthcare-focused news and professional information.
Secure communication	Includes professional communication tools such as secure faxing and messaging-related features.
Telemedicine	Supports virtual healthcare communication and clinical workflows.
Career opportunities	Helps healthcare professionals explore jobs and career opportunities.
Specialty-focused ecosystem	Provides content and networking relevant to different medical specialties.

2. Doximity — Where It Lags / Disadvantages

Limitation	Impact
Healthcare-professional focused	Primarily built around healthcare professionals, so it is less suited to the complete student journey.
Limited student-oriented ecosystem	Not primarily designed around student learning, academic projects, internships, or college collaboration.
Communication limitations	Its core value is professional networking and clinical/career tools rather than being a complete academic collaboration platform.
Networking over structured learning	It is not primarily a platform for structured courses, student projects, mentorship programs, or academic communities.
Narrower audience	Its healthcare focus can make it less useful for broader student-career ecosystems.

3. Handshake — Top Features

Feature	Purpose
Job & internship search	Students can discover employment and internship opportunities.
Personalized recommendations	Opportunities can be recommended based on profile, interests and career goals.
Employer networking	Connects students with recruiters, employers and alumni.
Career fairs & events	Supports discovery of career events and employer interactions.
Career content	Provides career advice, articles, videos and related resources.
AI career tools	Offers AI-assisted career and job-search features for eligible users.
Student profiles	Profiles can help employers discover students and their skills.

4. Handshake — Where It Lags / Disadvantages

Limitation	Impact
Career-focused, not education-focused	Strong for jobs and internships, but not designed specifically around specialized academic learning.
Not specialized for Ayurveda	It does not provide a dedicated ecosystem for Ayurvedic subjects, classical texts, herbs, clinical learning, Panchakarma or Ayurveda research.
Employer access can be restricted	Employer-student interactions can depend on institutional approval and platform rules.
Not every job is visible to every student	Approval, eligibility and employer-side processes can limit the opportunities visible to individual students.
Third-party recruiter risk	Students need to remain alert to suspicious recruiters and requests to move communication off-platform.
Limited domain-specific mentorship	It is not centered around long-term mentorship from practitioners and subject experts in one specialized field.

5. Opportunity for SIH26044

Doximity is primarily a professional healthcare networking ecosystem, while **Handshake** is primarily a student career and recruitment ecosystem. For an Ayurveda-focused solution, there is an opportunity to bring the strongest ideas from both into one specialized platform.

Proposed Differentiation

- ■ **Learning:** Ayurveda-specific study resources, structured learning and academic support.
- ■■■■ **Mentorship:** Connect students with Ayurvedic doctors, teachers, researchers and experienced practitioners.
- ■ **Research:** Support research projects, collaboration, publications and discovery of relevant opportunities.
- ■ **Internships & Jobs:** Domain-specific internships, apprenticeships and career opportunities.
- ■ **Networking:** Student, faculty, practitioner, researcher and alumni communities.
- ■ **Ayurveda-specific resources:** Herbs, classical texts, clinical learning, Panchakarma and other domain-focused material.

Key USP

Learning + Mentorship + Research + Internships/Jobs + Networking — all within one Ayurveda-focused student ecosystem.

Note: The limitations above describe gaps relative to the needs of an Ayurveda-student platform; they do not mean the existing platforms are ineffective at their intended purposes.
