Recommended Skill Categories for the SIH Platform

For a stronger job-matching system, skills can be grouped into five categories. These categories can be used in the student profile, job database, skill-gap analysis and recommendation engine.

Skill Category	Examples
1. Ayurveda Domain Skills	Samhita, Dravyaguna, Panchakarma, Rasashastra and related Ayurveda knowledge.
2. Clinical Skills	Diagnosis, patient assessment, treatment planning and patient management.
3. Research & Technical Skills	Research methodology, statistics, clinical trials, data analysis and scientific writing.
4. Industry Skills	GMP, quality assurance/quality control, regulatory affairs and product development.
5. Soft Skills	Communication, teamwork, leadership, counselling, problem-solving and critical thinking.

Example: Skill-Gap Analysis

The platform can compare a student's current skill level with the required level for a selected job role.

Required Skill	Student Level	Required Level	Gap
Clinical Research	40%	80%	40% – High
GCP	20%	70%	50% – High
Data Analysis	60%	70%	10% – Low
Documentation	80%	70%	Ready
Communication	75%	70%	Ready

Example Recommendation: If the student targets Clinical Research Associate and has gaps in GCP and Clinical Research, the system can recommend a GCP certification, clinical research course and relevant internship.

How this supports SIH26044

The skill map can power a recommendation workflow: Student Profile → Skill Assessment → Job Matching → Skill-Gap Identification → Recommended Courses/Certifications → Internship/Placement Suggestions.
